

## **MODEL 2000 HEAVY DUTY AUTOMATIC DOOR OPENER**

**HANDICAP** Compliant Low Energy Door Operator

**CONTROLLED ACCESS** To Secured Areas

**FULL ENERGY** With Safety For High Traffic Retail And Commercial Situations

The Model 2000 is a "One Size Fits All" product for both interior and exterior, low and full energy applications. Designed primarily for large exterior doors as well as all interior applications of low energy (ADA) requirements. The Model 2000 is perfect for all full energy automatic door situations as the control is compatible with all safety products. Economical, self-contained operators accommodate a wide range of traffic conditions and door sizes/weights up to 250 lbs.. Numerous opening signal devices will activate the operator for access by disabled persons. Adjustable hold-open time is 0-60 seconds. When the door is obstructed, opening force is restricted and the door immediately begins to close. Our operators are highly reliable, cost competitive and easy to install and service. Automated Entrance's exclusive mounting bracket design allows for fast and economical bolt-on

installation by one person. Engineered to minimize installation time, all models are shipped fully assembled and wired. Quick delivery on standard size orders of 39 1/2", 45" and 75".

Door security is our fastest area of growth. Our operator is the perfect solution for controlled access situations as our control will interface with all key and card security systems, locking devices and computer control entries.
